# SAFE & SOUND

## New Dual Keychain Design

For convenience, we added a second key chain so you can attach your daily keys instead of carrying them separate

Protect your vehicle against theft by Key Fob relay attack

## Criminals can exploit a vulnerability in keyless entry/start systems using a digital theft technique called relay attack.

The Sanji faraday bag has two pockets that are both protected and have anti-radiation capabilities. Store your credit or bank cards in one pocket and your keyless vehicle entry remote in the second pocket. After inserting the items, close the velcro flap for full signal-blocking functionality. Once your key fob is inside the bag, it will provide a complete signal block and prevents thieves from picking up and relaying signals. Remove the key fob from the pouch for keyless entry, starting and vehicle driving. For complete protection after exiting the vehicle and locking the doors, insert the key fob into the bag and close the velcro flap. Your vehicle is now safe and sound.

### Specifications

Product Size: 125 \* 80mm (Closed)  
Pockets: Dual  
Keychain: Dual  
Material: Carbon Fiber PU Leather  
Closure: Velcro  
Net weight: 20gram  
Shielding material: Dual Side - Mesh Wire Cloth Mix  
RF Shielding: Over 70dB  
Blocking range: Wi-Fi, Bluetooth, GPS, FM, GSM, LTE, NFC, etc  
Specifications subject to change without notice

Protect your keys and credit cards.
